

MOLD MANAGEMENT OVERVIEW

The Red E Vault software is a data entry, management, synchronization and backup system allowing your business to keep its data secure, highly available and easy to update. The software includes a template generator so users can customize the included set of templates or create new ones for their specific industry or application. The Red E Vault software also allows your company to enforce business rules through the use of various validation and required field attributes that can be set on a per field basis resulting in more accurate and complete data entry. After altering data in your Red E Vault device or on our web site, the changes will be synchronized between the device and the web site the next time the software is run from an internet connected Red E Vault device. This allows for mold maintenance oversight and management from off site locations or, when on location and connected to your Red E Vault device using a netbook, laptop or desktop computer.

INNOVATIVE SOFTWARE

The Red E Vault mold management solution utilizes the Red E Vault device's easy to use mold management software and cloud backup services, providing you with offsite backup and 24/7 access to your mold data. The innovative Red E Vault system allows you to secure and store important process parameters, mold repair logs, and drawings while enforcing business practices, increasing mold technician accountability and assisting in ISO compliance with one easy to use storage solution. The Red E Innovations data services allow you to manage your mold data and provides a thorough overview of multiple molds through our secure website.

Our user friendly software was designed to help mold owners secure and manage their mold data while allowing quick and easy access to templates, drawings and files, with the administrative option to control each user's data access permissions. Employing the Red E Vault management solution grants you peace of mind, knowing your data is backed up safe and secure with confidential data access granted to specific users. The Red E Vault device's 8GB of memory and the ability to optionally encrypt your files using the AES-256 encryption algorithm guarantees your data is easily accessible and secure.

FEATURES:

- Password protected access and file security
- File and data encryption
- Permanent on mold data storage
- SSL secure synchronization between Red E Vault device and website
- View and update data via RedEVault.com
- Secured offsite backup
- Assists in ISO compliance
- Multilingual interface
- Stores all digital file types
- Custom data entry template designer
- Enforces business process
- Corporate branding
- Each Red E Vault device has its own ID#
- Revision tracking

BACKUP AND SYNCHRONIZATION SERVICES

The Red E Safe and Red E Sync data storage solutions are available to protect your valuable data from damage or loss. With our Red E Safe service, the data on your device is encrypted, compressed and securely transferred to the Red E Innovations servers where it can be retrieved if your device is damaged or stolen. Our Red E Sync service not only functions as a backup service but also allows you to manage your Red E Vault device through the RedEVault.com secure management interface. Through our web based interface, you can view, update or add information to any Red E Vault device with an active Red E Sync subscription. Once your changes have been made, you can connect the Red E Vault device to any windows based internet connected computer system and securely synchronize the files and data so the most recent information will be available on both the Red E Vault device and the RedEVault.com website.

The Red E Innovations servers are housed in a world class data center located in Troy, Michigan. Some additional information about our serving environment and facility can be found below.

- 24 hour secured access for Red E Vault staff
- Multiple and redundant fiber paths to multiple upstream carriers
- Only Cisco routers and switches throughout
- Full layer-3 failover and load balancing using BGP
- Superior national and international ping times
- 9 redundant (n+1) Liebert Precision System/3 air conditioning units and 20 foot high ceilings for heat dissipation
- Three Liebert online double conversion uninterruptible power supplies (zero transfer time)
- Diesel Generator (tested weekly) as backup to Liebert UPS systems with a minimum 2 day run time using indoor fuel tanks and includes priority refueling contracts with multiple vendors. We did not lose power during the entire East Coast blackout!
- Liebert surge suppression system guards the entire building
- Two independent digital video recording security systems cover entire perimeter and internal data center
- Above 500-year flood plain
- Systems are monitored by Red E Vault device as well as on site data center staff
